Speed-oligo® INFLUENZA A H1N1 test now available for sale in Ireland

Biotrin launches a new diagnostic tool for the diagnosis of **Influenza A H1N1** in the Irish market. This product is part of its distributed range of products from Vircell SL.

The new [Speed-oligo® Novel Influenza A H1N1 kit](#) (ref. SP015) allows for the visual and direct analysis of a PCR, in just 5 minutes. The kit contains all reagents necessary to perform the PCR reaction (including several PCR mix prepared vials in lyophilized format) and the strip detection.

The new test was developed by Vircell in conjunction with several Spanish hospitals. It offers laboratories a new sensitive and specific diagnostic method to detect the swine flu strain of Influenza A, which has been circulating on a pandemic scale since its identification in Mexico in April 2009.

Further technical information and performance data on the product can be found on the Vircell website www.vircell.com or by clicking [Speed-oligo® INFLUENZA A H1N1](#)
